Return springs retract the shoes after brake application. The brake drum mounts on the axle or wheel hub, and some drums incorporate the hub. Most brake drums are made of solid cast iron, but there are also steel and aluminum drums with cast iron liners. The machined friction surface on all drums is cast iron.

It does sound more like a brake disk problem. Most likely while you are turning the brake pad is shifting on the brake disk and coming into contact with the unused section of the brake disk around the outside or inside causing a grinding noise. Often times having your brake rotor resurfaced can solve this problem.

Why is There Noise When Turning my Steering Wheel ...
