2 Introduction • Earthquakes represent the vibration of Earth because of movements on faults. • The focus is the point on the fault surface where motion begins. • The epicenter is the point on Earth's surface directly above the focus. The deadly Izmit earthquake struck northwest Turkey on August 17, 1999, at 3 a.m. Over 14,000 residents of the region were killed as poorly constructed ...

**Earthquakes - Kean University**  
Bruce Bolt describes the origins, impact, and aftermath of some of history's most quakes, including relatively recent ones in Mexico City, Chile and California, and he shows what scientists have learned from them—seismologists are able to predict the time, location and ground motion with incresing accuracy; learning how to develop more earthquake resistant structures; more effective survival strategies.
