Earth is the third planet from the Sun and the only astronomical object known to harbor life. While large volumes of water can be found throughout the Solar System, only Earth sustains liquid surface water. About 71% of Earth's surface is made up of the ocean, dwarfing Earth's polar ice, lakes, and rivers. The remaining 29% of Earth's surface is land, consisting of continents and islands.

A volcano is an opening in the earth's crust that may eject lava, hot vapor and gas. Learn about the different types of volcanoes including composite cones, shield, and cinder cones.

Types of Volcanoes: Shield, Cinder Cones & Composite Cones

A Tsunami or a chain of fast moving waves in the ocean caused by powerful earthquakes is a very serious challenge for people's safety and for earthquake engineering. Those waves can inundate coastal areas, destroy houses and even swipe away whole towns. This is a danger for the whole mankind. Unfortunately, tsunamis cannot be prevented. However, there are warning systems which may warn the ...

Earthquake - Simple English Wikipedia, the free encyclopedia

Continental arcs have been recently proposed to have a “double-edged” effect in affecting the carbon dioxide (CO₂) concentration in the atmosphere (e.g., Lee et al., 2019). On one hand, continental arcs can be major CO₂ sources through volcanic and metamorphic degassing (McKenzie et al., 2016). On the other hand, continental arcs can also act as CO₂ sinks by rapid erosion of high ...

In the first part of the paper (Section 2), we review observational constraints on slab morphology from seismic tomography and slab seismicity, and constraints on subduction dynamics from the plate motion record. Subsequently, in Section 3, we discuss what has been learned from modeling slab dynamics in the transition zone.
