Scheme is a minimalist dialect of the Lisp family of programming languages. Scheme consists of a small standard core with several tools for language extension. Scheme was created during the 1970s at the MIT AI Lab and released by its developers, Guy L. Steele and Gerald Jay Sussman, via a series of memos now known as the Lambda Papers. It was the first dialect of Lisp to choose lexical scope and ...

R List is an object in R programming which includes matrices, vectors, data frames, or lists within it. The list() function is used to create lists in R programming. We can use the [[index]] function to select an element in a list. The value inside the double square bracket represents the position of the item in a list we want to extract.
