"Chemical Reaction Engineering" by Octave Levenspiel offers an excellent introduction to the subject. The text is well compiled, the examples are very helpful and the problems at the end offer great practice. However, I did feel that two things were missing from the edition I studied: 1. The answers to the problems should have been provided for better assistance.

For a liquid-solid reaction system, the reaction rate is generally controlled by one of the following steps: diffusion through the liquid film, diffusion through the ash/product layer or the chemical reaction at the surface of the solid particles (Levenspiel, 1972). The speed of the process is controlled by the slowest of these sequential steps.
