Rudin's Real and Complex Analysis is my favorite math book. I've studied it thoroughly as an undergrad/early grad student when I was training to be a research mathematician working in complex and harmonic analysis. Like much of Rudin's other writings, this book is written from an advanced perspective.

Rudin's Real and Complex Analysis is an excellent book for several reasons. Most importantly, it manages to encompass a whole range of mathematics in one reasonably-sized volume. Furthermore, its problems are not mere extensions of the proofs given in the text or trivial applications of the results- many of the results are alternate proofs to major theorems or different theorems not proved.

We will assume here familiar computational facts about the real numbers, including the existence of a real number $\sqrt{2}$, though Rudin does not formally introduce the real numbers till several sections later. (a) By rationalizing denominators, get a non-fractional formula for $\frac{1}{\sqrt{0-2}+1}$. Deduce that if $x = \sqrt{0-2}+1$, then $x = (1/x)+2$.
