In chemistry, a nonmetal is a type of chemical element generally characterized by low density, low strength, and a tendency to form acidic compounds. About half are colored or colorless gases whereas nearly all metals are silvery-gray solids. Most are poor conductors of heat and electricity, unlike metals. Their reactivity, akin to that of the metals, ranges from highly active to noble, the ...

Electric vehicles (EV) are quickly gaining a foothold in global markets due to their zero tailpipe emissions and increasing practicality in terms of battery technologies. However, even though EV powertrains emit zero emissions during driving, their efficiency has not been fully optimized, particularly due the commonly used single-speed transmission. Hence, this paper provides an extensive ...
